

Transgender/Trans* Services at the UCSC Student Health Center

At the UCSC Student Health Center we care about your health and safety. We are sensitive to how hard it can be to access care. We believe everyone has a right to be treated with dignity and respect. We encourage you to be open and honest with us so we can assist you in getting the best care possible. Please tell us your preferred name and pronouns.

Hormones

Students who are interested in beginning hormones start by making an appointment with one of our providers with experience in hormone gender reassignment. Call the appointment desk at 831-459-2500. Ask for an appointment to speak to someone about “gender questions.” Several visits are involved before we start hormones. These visits include a physical exam, laboratory studies and evaluation by the provider.

Consent for Hormones

Students who choose to take hormones will be asked to sign a consent for hormones. The consent reviews the risks and benefits of hormones. At the Student Health Center we request that the student review this consent with our Behavioral Health Consultant prior to the appointment with the clinician where the consent will be signed. Reviewing the consent with the Behavioral Health Consultant allows the student to prepare any questions or identify any concerns about the hormone process in advance of their meeting with the clinician to sign the consent.

Therapeutic Support

Having a therapist who can support you through the transition process can be extremely helpful. Therapy can also help students work to have a healthy relationship with their families as they transition. We encourage students to consider therapy; however, this is not a requirement. We work closely with a community of therapists dedicated to supporting people with gender transition.

Another important source of support for gender transition is the [Lionel Cantu GLBTI Resource Center](#). In addition to resources, the Cantu center hosts the weekly Blender group. The Cantu Center also employs a Trans Education Specialist who is a source of all kinds of good information and support.

On-going Care

During the transition period, the student will meet regularly with their medical provider to determine that there are no unexpected consequences from the hormones. The student will need to have regular blood tests. Regular visits give students the opportunity to discuss the changes they are experiencing and their experience of these changes. When the student approaches graduation, the medical provider will work with the student to plan care after graduation.

Transfer of Care

If you have already started hormones somewhere else, have your medical records sent to the UCSC Student Health Center before you have your first appointment. We will want your shot records and most recent lab work. Students continuing on hormones who have not obtained prior medical records for us should make an appointment with a clinician to discuss their on-going care. For help transferring your records, call our Medical Records office at 831-459-3063.

Surgery

Students who are interested in surgery will be referred to specialists off campus. For insurance coverage it is necessary to have a referral from the Student Health Center. Some specialists may require additional documentation or letters from therapists. We can help you navigate these requirements. Insurance requirements and coverage vary year to year. The student can expect to pay a deductible and some percentage of the cost of surgery. The specialist office and our SHS Insurance Office will help the student understand their coverage. When considering surgery getting accurate insurance information is important so the student can plan for their out-of-pocket costs.

Legal Gender and Name Changes

We can complete the necessary paperwork for name and gender change for driver's license, passport, social security number or other documents.

Gender Change Without Surgery or Hormones

Some people live as their authentic gender without hormones or surgery. It can be just as important for these people to change legal documents to match their authentic gender. It is not necessary to take hormones or have surgery to make these changes. Please make an appointment with a provider who has experience in gender issues to discuss this if appropriate.

We strive to be sensitive to the needs of all the students at UCSC. Please let us know if you have additional questions or concerns. You may call our Patient Care Coordinator, Beth Hyde, NP at 831-459-3952 for more information.
