Onsite Dental has had no known COVID-19
and we’re working hard to keep it that way for you.

We’re taking advanced precautions to provide a safe environment.
• All our practices have high-grade HEPA air filters that exceed CDC standards.
• We completely wipe down surfaces between each patient, including doorknobs, signature pads, chairs, desks and counters, etc.
• Our self-contained sterilization labs are specifically designed for greater safety and security, and we use individually-wrapped disposable products when appropriate.

We’re taking precautions to ensure a safe team.
• Every staff member has been tested for COVID-19 and is screened daily upon arrival.
• We’ve increased our PPE guidelines so that all of our staff wears protective gear.
• Staff has been directed to follow the principle of Standard Precautions, which is to “act as if you and everyone around you is infectious.”

We implemented additional processes to further reduce the risk of contagion.
• Our appointment schedule will be staggered to avoid congregation.
• Patients are permitted to wait near the practice and receive a text notification once our staff is ready for them to enter.
• All patients are screened upon arrival, including a non-invasive temperature scan.
• All patients will be required to sanitize their hands upon entering our practice.
• New paperless policies will keep your visit as “touchless” as possible.
• Follow-ups will be held virtually through teledentistry when possible to reduce the need for in-person interaction.

Open for Patients Starting May 13
