Onsite Dental Reopening at UC Santa Cruz

Onsite Dental is reopening its practices this week and appointments can be scheduled today. To ensure that patients with immediate needs can be seen quickly, Onsite Dental is reopening in two phases.

- **“Immediate Need” patients can be seen in-person starting May 13.**
- **All other patient care including General Dentistry will begin May 20.**

Immediate need patients are those who: need immediate treatment, were in the middle of treatment when the shutdown began, are currently in pain, or had treatment scheduled during the shutdown. If you had an appointment scheduled during the shutdown, your Onsite Dental practice will contact you soon to reschedule.

In addition to prioritizing care for those who need it most, Onsite Dental has gone to great lengths to protect your safety from COVID-19. While there have been no known cases of COVID at any of Onsite Dental’s practices nation-wide, the company proactively implemented a wide range of new safety protocols to further protect its team members and patients.

Onsite Dental’s additional safety measures provide you with...

**a safe environment.**

- All practices have high-grade HEPA air filters that exceed the CDC standards.
- Self-contained sterilization labs were specifically designed for greater safety and security, and individually-wrapped disposable products are stocked for use when appropriate.
- Social distance markers and plexiglass provide additional safeguards in the practice.
- Enhanced sanitization include the complete wipe down of surfaces before each patient (including doorknobs, signature pads, chairs, desks and counters, etc.)

**a safe team.**

- Every staff member will be tested for COVID-19 symptoms and is temperature screened daily upon arrival.
- All Onsite Dental staff will be wearing the latest protective gear to protect against the COVID-19 virus.
- Staff will continue to follow the principle of Standard Precautions, which is to “act as if you and/or everyone around you is infectious.”

**a safe process.**

- Appointments will be staggered to avoid congregation.
- Patients can wait at their work station or nearby and receive a text or call when staff is ready.
• All patients are screened upon arrival including a non-invasive temperature scan.
• All hands will be sanitized when entering.
• Paperless visits keep the appointment as “touchless” as possible.
• Virtual follow-ups reduce in-person interaction.
